Dear Hiring Manager,

I'm a Senior Software Engineer and mobile product leader with 6+ years of experience building Flutter-based products across fintech, OTT, and AI. I'm excited to bring a blend of hands-on engineering, product ownership, experimentation, and team leadership to your organization.

In my current role as Team Lead at Made Card, I own mobile architecture and product delivery for conversion-focused fintech experiences. I increased average monthly Subscription Card spend from approximately \$90 to \$120 per active user through iterative A/B testing, doubled user activation from 10% to approximately 20%, and helped generate 25-30 qualified mortgage leads per month. I also built scalable interaction analytics and engagement heatmaps that gave leadership stronger data for third-party aggregator negotiations.

Previously at STAGE, I led mobile initiatives for a product serving a 40M+ user base. My work improved DAU by 7%, increased average monthly watch time from 5.5 to 6 hours, improved Month 1-to-Month 2 retention by 5%, and reduced boot-time requests by 50% while lowering costs by 22%. I also shipped the STAGE TV app from scratch to production in under two weeks and built attribution backfilling to preserve ad-set-level AppsFlyer data for late-signup users.

What I bring is more than Flutter implementation: I enjoy turning ambiguous customer or business problems into measurable product outcomes. I'm comfortable owning user journeys, funnels, A/B experiments, analytics instrumentation, performance improvements, and delivery with cross-functional teams. I also use AI-assisted engineering workflows thoughtfully to accelerate execution without compromising product quality.

I would welcome the opportunity to discuss how my experience in mobile product engineering and growth-focused delivery could contribute to your company's goals.

Sincerely,

Yash Srivastava
